

What is CI/CD?

CI: **Continuous integration** is a coding philosophy and set of practices that drive development teams to frequently implement small code changes and check them in to a version control repository.

CD: **Continuous delivery** picks up where continuous integration ends, and automates application delivery to selected environments, including production, development, and testing

Benefits of CI/CD

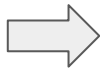

Reduce Cost

Avoid Cost

Increase Revenue

Avoid or Reduce Cost

Automate Infrastructure
Creation / Cleanup

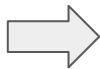

Less human error and less
infrastructure costs from
unused resources

Reduce / Avoid cost

Increase Revenue

Deploy to Production
Without Manual Checks

Developers can ship more
codes in the same amount
of time

You pay the same, but they
can do more things
